PRODUCT INFORMATION

End-to-end journey management and risk assessment solutions for Mining, Resources and Construction.

Be the safety guardian of the people travelling for your business.

Your people are precious. Keep them safe.

MANAGE TEAMS ACROSS NUMEROUS WORK SITES AND SAFEGUARD LONE WORKERS TRAVELLING REMOTELY.

Travelling between job sites, delivering products and assets, transporting people - there are many reasons why employees in the mining, resources and construction sectors drive as part of their work day.

In rural and remote areas, travel can include hazards such as fatigue, driver error and vehicle malfunction, all of which can occur in areas with limited mobile reception.

When it comes to keeping your workers safe while they are on the road, the first

step is to have proper risk management strategies in place to ensure emergency support is deployed quickly in the event of an accident, break down or injury.

By mapping out road journeys and monitoring these trips, you can increase driver safety and respond to emergencies quickly...

A process that JMS automates for you.

Reduce motor vehicle accidents

Effective journey management reduces the likelihood your employees will be involved in an accident. Fewer accidents mean fewer injuries to employees, less property damage and reduced insurance and administrative costs.

Monitor and report

JMS helps you remain informed of staff transit schedules, destinations, risks and other relevant journey information. The software uses the inbuilt GPS of the mobile device to track the live location and provide accurate ETA predictions.

By using GPS, JMS knows for certain if a user hasn't reached an identified stop, checkpoint, break point or destination and notifies managers immediately via SMS, email or push notification.

JMS can also help monitor fatigue automatically calculated on distance or time and make recommendations on rest locations and times to resume the journey.

Address legal requirements

Practices in an active Journey Management Planning (JMP) helps employers address their legal obligations to make employees aware of hazards, evaluate potential risks, and implement measures that eliminate or minimise those risks.

Effective JMP solutions also handle requirements around driver qualifications, working (driving) alone and others. Documented trip plans, check-ins and related records all contribute to an organisation's due diligence.

Duty of care and liability

Data from the Australian Safety and Compensation Council (ASCC) indicates that vehicle accidents represent 41% of all compensated work fatalities.

JMS will help your workplace meet your WHS due diligence obligations and protect your greatest asset - your people.

Automated, real-time journey management monitoring. Key Features

The JMS app is packed full of features.

This is not a typical journey management system that involves the risky process of manual SMS check-ins, which can lead to heavy penalties or worse. Our system automates and manages the entire process to keep your workers hands-free and safe.

REAL-TIME MOBILE GPS

High accuracy mobile GPS provides instant or last known location info with multiple timezones supported.

AUTO CHECKPOINTS + ALERTS

Automated geolocation check-in notifications are sent via SMS, push notification and email with no driver interaction required.

FULLY CUSTOMISABLE

Each business and industry is different. Our team will work with you to create a personalised solution for your needs.

IVMS INTEGRATION

There are numerous In-Vehicle Monitoring System (IVMS) providers, and JMS can integrate with the vast majority of them.

OFFLINE CAPABILITY

Create a trip and complete a trip even if the mobile device is offline. JMS can still capture data using GPS.

FATIGUE NOTIFICATIONS

Tired drivers are unsafe drivers. JMS will alert you if your workers have been on the road too long.

VERBAL REMINDERS

Verbal alerts for essentials such as rest breaks, so drivers never touch their phones on the road.

DURESS BUTTON

Ultimate safety assurance with an emergency button to trigger alerts and escalate responses.

DIGITAL FORMS

Automated data and compliance for paper-free operations via integrated Digital Forms software.

JMS is auditable for internal or client reporting and is customisable to align with any risk mitigation strategy. From departure and safety alerts to incidents and arrival, JMS will keep you updated along every step of the journey.

Assurance for any industry.

Mining, Resources + Construction

KEEP WORKERS SAFE IN REMOTE LOCATIONS

Travelling as a work function is vital across all tiers of the resources sector including oil, gas, mining and renewables. These workers also traverse large distances between job sites, often in remote and rural locations. Construction also has a high volume of travelling workers with projects dotted across vast distances geographically.

JMS HAS THE FEATURES YOU NEED FOR COMPLETE PROTECTION

Monitoring a remote workforce in resources and construction can be a challenging task and many journey management plans require manual check-ins.

The JMS app automates this process with features including:

- Geotagged checkpoints
- Alerts through SMS, push notification and email
- Fatigue management
- Full fleet monitoring
- HSE compliance

Easy. Powerful. Customisable.

Design your solution

The JMS team will help you get started with a customised solution, built on the capabilities **you** need.

- ✓ 30 day free trial
- ✓ SMS, email or push notifications
- ✓ Fatigue alerts
- ✓ Configurable notifications
- ✓ Global coverage and multiple timezones
- ✓ Configurable workflow approval process
- ✓ Digital forms for site / equipment audits
- ✓ Group messaging
- ✓ Real-time GPS
- ✓ Escalation processes
- ✓ Generic risk assessments
- ✓ Bespoke risk assessments
- ✓ Branded portal
- ✓ Single sign-on
- ✓ Satellite device integration

Try the JMS software **FREE**
for 30 days

Don't just take our word for it, see it for yourself and be sure. Test drive the JMS app with a 30 day free trial. It's the best way to see how JMS keeps your staff safe, and your business compliant.

The best part is, we can have you set up in a snap.
